

Alpine Security's CISO-as-a-Service

Data has become one of the most valuable assets an organization can create, collect, or store, but it can also be an organization's greatest liability.

Cybersecurity is a fundamental need for almost all businesses, but many organizations do not have a clear strategy for how to incorporate cybersecurity into their organizational business practices. Small to mid-sized organizations often lack the resources to bring on a full-time Chief Information Security Officer (CISO) to develop and oversee the implementation of cybersecurity solutions, and often do not understand how to prioritize where to spend resources to improve their cybersecurity posture.

*The purpose of Alpine Security's CISO-as-a-Service is to provide organizations with an affordable fractional and virtual CISO solution to help you reduce risk and develop a strategic cybersecurity plan. **We help you mature your cybersecurity posture in alignment with your compliance requirements and business objectives.** The CISO-as-a-Service is an annual program that tailors cybersecurity solutions for your organization, and develops a short, medium, and long-term **strategic cybersecurity plan** for your organization to implement.*

Strategic vs. Tactical roles

The CISO-as-a-Service plays a strategic role within your organization by assisting your leadership team with the adoption of a business-aligned cybersecurity strategy. We develop an overall strategic cybersecurity plan that includes 1, 2, and 3 year planning to meet cybersecurity objectives and we provide guidance and recommendations on cybersecurity best practices that will help prevent cybersecurity incidents and data breaches.

The CISO-as-a-Service guides and assist your organization's IT and cybersecurity personnel as they perform the necessary tactical tasks to implement the strategic cybersecurity plan. Your organization may elect to outsource some of the tactical work related to the strategic cybersecurity plan, and the CISO-as-a-Service will assist with the project management oversight for all tactical cybersecurity related projects to ensure that they are aligned with the strategic cybersecurity plan and the organization's business objectives. **Alpine Security can also provide the tactical support on a project or hourly basis.**

CISO-as-a-Service Overview

- ✓ Single point of contact (Project Manager) for all tasks and deliverables
- ✓ Includes initial Data Breach Prevention Audit (BPA) and initial Cybersecurity Maturity Model Certification (CMMC) baseline assessment
- ✓ Includes review of the BPA and CMMC baseline assessment results
- ✓ Includes development of interim Incident Response Plan (IRP), if applicable
- ✓ Includes interim enterprise risk assessment to determine or confirm critical assets and critical systems
- ✓ Includes development of Cybersecurity Roadmap with quarterly “rocks” in alignment with compliance requirements and business objectives
- ✓ Includes oversight of development and implementation of formal Incident Response Plan (IRP)
- ✓ Includes monthly, quarterly, and annual cybersecurity program reports
- ✓ Includes incident response oversight while serving as CISO
- ✓ Includes bi-annual BPA and CMMC assessments to quantifiably measure cybersecurity maturity progress
- ✓ Includes remote support for client meetings with vendors, partners, clients, executives, etc. where a CISO is required
- ✓ Includes cybersecurity SME access and consulting
